

HOW IT'S MADE

The Discovery Channel's "How It's Made" production company filmed on Friday, April 8, 2011 at Whelen New Hampshire. Our Mass Notification and Vehicle Sirens will be featured on an episode of their show. We will advise the air date and time. The following pictures show the processes they filmed. It took only 11-1/2 hours this time to film this 4 minute, 40 second segment.

Tunie Mitchell showing the first stages of winding a transformer

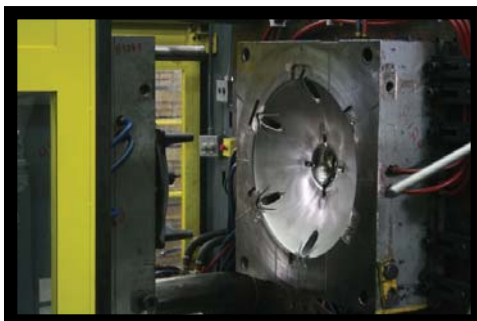

Lisa Rutkowski demonstrating the 2nd step of winding the transformer

Laura Baxter installing the "E's" and "I's" onto the transformers

Richard Von Dreden assembling a 295SLSA6

Mold for one half of the speaker cell

Filming of the injection molding process

Crew filming the molding process

Jessica Lyles is removing speaker brackets from the powder coat line

HOW IT'S MADE

Film crew viewing a sheet of stainless steel being punched and laser cut

Film crew on lift to be positioned over the Bend Master cage

Mass Notification cabinets being bent into shape by a robotic arm

Jack Chapman installing control panel in cabinet

Film crew filming the control panel cabinet and 5 cell speaker

Film crew getting ready to film outside

Outside picture of items being featured

Close-up of Mass Notification Speaker and solar panel
